

# Seagrass Ecosystems:

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Seagrass, coral reefs, and mangroves are all

**ECOSYSTEMS**

found in the Florida Keys.

They provide a place for organisms to interact .

There are **6** main types

(how many?)

of seagrass in the Florida Keys.

# REEF RELIEF

Two of the seagrasses found in the Florida Keys are named after the organisms that

**EAT**

\_\_\_\_\_ them! These species are the

**TURTLE**

\_\_\_\_\_ grass and

**MANATEE**

\_\_\_\_\_ grass.

Seagrass is important because it gives sea stars

and other organisms a **HOME or HABITAT** \_\_\_\_\_.
